

Enterprise AI Document Intelligence Platform: Application Flow and Design Documentation

This document outlines the complete application flow and design considerations for an enterprise-grade AI-powered Retrieval-Augmented Generation (RAG) platform. The design aims for a production-ready SaaS application, similar in quality and functionality to leading platforms like ChatGPT Enterprise, Notion AI, Glean, Microsoft Copilot, and Slack AI, focusing on intuition, scalability, and enterprise readiness.

Project Purpose

The primary purpose of this platform is to enable organizations to upload documents, perform comprehensive searches across their content, and engage in AI-powered chat interactions that provide grounded answers with verifiable citations.

User Roles

To ensure robust access control and tailored experiences, the platform will support the following user roles:

1. **Super Admin:** Possesses the highest level of administrative privileges, overseeing the entire platform, managing organizations, and monitoring system health.
2. **Organization Owner:** The primary administrator for a specific organization, responsible for managing organization-level settings, billing, and inviting/managing other users within their organization.
3. **Organization Admin:** Assists the Organization Owner in managing users, workspaces, and documents within their assigned organization.
4. **Editor:** Can upload, manage, and edit documents, as well as utilize AI chat and search functionalities within designated workspaces.
5. **Viewer:** Has read-only access to documents, AI chat, and search functionalities within designated workspaces.

1. Complete User Journey

The complete user journey encompasses the entire lifecycle of a user interacting with the platform, from initial discovery to ongoing engagement and management. This flow is designed to be seamless and intuitive, guiding users through each critical step.

Journey Map:

mermaid

Detailed Steps:

1. **Landing Page:** The initial touchpoint for prospective users, providing an overview of the platform's capabilities, benefits, and calls to action for signing up or learning more.
2. **Sign Up:** Users create an account, typically involving email and password, or through single sign-on (SSO) options like Google or GitHub.
3. **Email Verification:** A standard security measure to confirm the user's email address, often via a verification link sent to their inbox.
4. **Organization Creation:** For new organizations, the first user (typically the Organization Owner) sets up the organization's profile, name, and initial settings.
5. **Workspace Creation:** Within an organization, users can create workspaces to logically group documents and manage access for different teams or projects.

6. **Invite Members:** Organization Owners or Admins can invite other users to join their organization and assign them specific roles (Editor, Viewer, Organization Admin).
 7. **Upload Documents:** Users upload various document types (e.g., PDFs, Word documents, text files) to their designated workspaces.
 8. **Processing:** The platform ingests and processes the uploaded documents, which includes steps like OCR, chunking, embedding, and indexing for AI and search functionalities.
 9. **Ready:** Documents are fully processed and available for search and AI chat interactions.
 10. **Search:** Users can perform semantic and keyword searches across their uploaded documents to find relevant information.
 11. **Chat:** Users interact with the AI, asking questions and receiving grounded answers based on the content of their documents.
 12. **View Citations:** The AI's responses include citations, allowing users to trace back the information to its source document and specific passages.
 13. **Manage Documents:** Users can view, organize, edit metadata, version, download, and delete documents within their workspaces.
 14. **Analytics:** Access to dashboards providing insights into document usage, AI interaction patterns, and user activity.
 15. **Logout:** Securely ends the user's session.
- .
- **Widgets:** Customizable information panels displaying key metrics, recent activity, document processing status, or AI usage statistics.
 - **Notifications:** A dedicated area or icon to alert users about important events, such as document processing completion, new invitations, or system alerts.

2. Authentication Flow

The authentication flow is critical for securing user access and managing identities within the platform. It encompasses various mechanisms to ensure both security and user convenience.

Key Components:

- **Login:** Users can log in using their registered email and password. The system will support secure password hashing and storage, along with mechanisms for brute-force protection.

- **Signup:** New users can register for an account, which typically involves providing an email address, setting a password, and agreeing to terms of service.
- **Forgot Password:** A secure process for users to reset their password, usually involving an email-based verification link.
- **Reset Password:** The final step in the password recovery process, allowing users to set a new password after successful verification.
- **Refresh Token:** Implementation of refresh tokens to maintain user sessions without requiring frequent re-authentication, enhancing user experience while preserving security.
- **Session Expiry:** Automatic session termination after a period of inactivity or a predefined duration, requiring users to re-authenticate for security purposes.
- **Google OAuth:** Integration with Google OAuth for single sign-on (SSO), allowing users to register and log in using their Google accounts.
- **GitHub OAuth:** Integration with GitHub OAuth for SSO, providing an alternative login method for users with GitHub accounts.
- **MFA (Multi-Factor Authentication):** A planned future enhancement to add an extra layer of security, requiring users to verify their identity using a second factor (e.g., authenticator app, SMS code).

3. Onboarding Flow

The onboarding flow is designed to smoothly introduce new users to the platform and guide them through initial setup, ensuring a positive first experience and quick adoption.

Onboarding Scenarios:

- **New User:** For users signing up for the first time, this flow guides them through organization and workspace creation, initial document upload, and their first AI chat interaction.
- **Returning User:** For users who have previously signed up but are returning after a period of inactivity, the system will recognize their existing setup and guide them to their last active workspace or dashboard.
- **Organization Setup:** The process for the first user of an organization to define the organization's name, basic settings, and invite initial members.
- **Workspace Setup:** Guidance for creating the first workspace, naming it, and understanding its purpose for document organization and access control.

- **First Upload:** An intuitive guided process for a user's initial document upload, including tips on supported formats and processing expectations.
- **First AI Chat:** A guided introduction to the AI chat functionality, demonstrating how to ask questions and interpret grounded answers with citations.

4. Dashboard Flow

The Dashboard serves as the central hub for users, providing an overview of their activities, quick access to key features, and relevant information. Its design prioritizes efficient navigation and personalized insights.

Dashboard Elements:

- **Navigation Hierarchy:** A clear and consistent navigation structure, typically including a primary sidebar and a top navigation bar, allowing users to easily move between different sections of the application.
- **Sidebar:** Contains primary navigation links to major sections like Workspaces, Documents, AI Chat, Search, Analytics, and Settings.
- **Top Navigation:** Provides access to global actions such as notifications, profile management, quick search, and organization/workspace switching.
- **Quick Actions:** Prominently displayed shortcuts for frequently performed tasks, such as Upload Document, Create Workspace, or Start New Chat.
- **Widgets:** Customizable information panels displaying key metrics, recent activity, document processing status, or AI usage statistics.
- **Notifications:** A dedicated area or icon to alert users about important events, such as document processing completion, new invitations, or system alerts.

5. Document Management Flow

The Document Management Flow details the lifecycle of documents within the platform, from initial upload to versioning and deletion, ensuring efficient handling and accessibility of organizational knowledge.

Key Stages:

- **Upload:** Users can upload various document types (e.g., PDF, DOCX, TXT) individually or in batches. The system will support drag-and-drop functionality and clear progress indicators.

- **Validation:** Upon upload, documents undergo validation checks for format compatibility, size limits, and potential corruption.
- **Duplicate Detection:** The system identifies and alerts users to potential duplicate documents, offering options to replace, keep both, or cancel the upload.
- **Virus Scan (future):** A planned security feature to scan uploaded documents for malware and viruses before processing.
- **OCR (Optical Character Recognition):** For image-based or scanned documents, OCR is performed to extract searchable text content.
- **Chunking:** Documents are broken down into smaller, manageable chunks to optimize for AI processing and retrieval accuracy.
- **Embedding:** Text chunks are converted into numerical vector embeddings, enabling semantic search and AI understanding.
- **Indexing:** Processed documents and their embeddings are indexed for fast and efficient retrieval by the search and AI chat functionalities.
- **Ready:** Documents are fully processed, indexed, and available for all platform features.
- **Versioning:** The platform maintains a history of document changes, allowing users to view previous versions and restore them if needed.
- **Delete:** Users can delete documents, with options for soft deletion (archiving) or permanent deletion, subject to appropriate permissions.
- **Restore:** Ability to restore soft-deleted documents from an archive or trash.
- **Download:** Users can download original or processed versions of documents.
- **Preview:** An integrated document viewer allows users to preview documents directly within the platform without needing to download them.

6. AI Chat Flow

The AI Chat Flow describes the interaction between the user and the AI, from posing a question to receiving a grounded, cited response, emphasizing accuracy and user feedback.

Interaction Steps:

- **Question:** User inputs a natural language question into the chat interface.
- **Query Preprocessing:** The user's question is analyzed and optimized for retrieval, including tasks like tokenization, stemming, and query expansion.
- **Embedding:** The preprocessed query is converted into a vector embedding to facilitate semantic matching with document chunks.

- **Vector Search:** The query embedding is used to search the document embedding index to retrieve relevant document chunks.
- **Reranking:** Retrieved document chunks are reranked based on relevance to the query, ensuring the most pertinent information is prioritized.
- **Context Building:** The top-ranked document chunks are assembled into a coherent context for the Language Model (LLM).
- **LLM (Large Language Model):** The LLM processes the user's question and the provided context to generate an answer.
- **Streaming Response:** The AI's response is streamed back to the user in real-time, improving perceived performance and user experience.
- **Citation Generation:** As the AI generates its response, it identifies the source document chunks and generates inline citations, linking back to the original content.
- **Feedback:** Users can provide feedback on AI responses (e.g., thumbs up/down), which helps in continuous improvement of the AI model.
- **Conversation History:** All chat interactions are saved, allowing users to review past conversations and pick up where they left off.

7. Search Flow

The Search Flow enables users to efficiently discover information across their documents using various search modalities and filtering options.

Search Capabilities:

- **Global Search:** A unified search bar accessible from anywhere in the application, allowing users to search across all documents and workspaces they have access to.
- **Semantic Search:** Utilizes vector embeddings to understand the meaning and context of queries, returning results that are conceptually relevant even if exact keywords are not present.
- **Metadata Search:** Allows users to search based on document metadata such as author, date created, document type, or custom tags.
- **Filters:** Advanced filtering options to narrow down search results by document type, date range, workspace, author, or other attributes.
- **Sorting:** Users can sort search results by relevance, date, document name, or other criteria.
- **Recent Searches:** A history of recently performed searches for quick access and re-execution.

- **Saved Searches:** Users can save frequently used or complex search queries for future use.

8. Document Viewer Flow

The Document Viewer Flow provides an integrated experience for users to review documents, understand AI citations, and interact with document content directly within the platform.

Viewer Features:

- **Preview:** Displays a high-fidelity preview of the document content.
- **Highlight Cited Text:** When viewing a document, passages that were used as citations in AI chat responses are highlighted, providing a direct link between AI answers and their sources.
- **Navigate Pages:** Intuitive controls for navigating through document pages.
- **Open Original File:** Option to open the original document file in its native application (if supported and downloaded).
- **Download:** Allows users to download the document.
- **View Metadata:** Displays detailed metadata associated with the document, such as upload date, author, size, and custom tags.

9. Workspace Flow

The Workspace Flow defines how users create, manage, and interact with workspaces, which serve as containers for organizing documents and collaborating with team members.

Workspace Management:

- **Create Workspace:** Users can create new workspaces, providing a name and optional description. This allows for logical segregation of documents based on projects, departments, or other criteria.
- **Rename:** Ability to rename existing workspaces to reflect changes in project scope or organizational structure.
- **Archive:** Workspaces can be archived when they are no longer actively used, preserving their content for future reference without cluttering the active workspace list.
- **Delete:** Permanent deletion of workspaces, subject to appropriate permissions. This action typically requires confirmation due to its irreversible nature.

- **Permissions:** Granular control over workspace access, allowing Organization Owners and Admins to define which users or roles have access to specific workspaces and what actions they can perform within them.

10. Organization Flow

The Organization Flow outlines the processes for managing an organization's presence within the platform, including user invitations, role assignments, and ownership transfers.

Organization Administration:

- **Create Organization:** The initial setup process for a new organization, typically performed by the first user who signs up from that organization.
- **Invite Members:** Organization Owners and Admins can invite new users to join their organization via email. Invited users receive a link to sign up or log in and join the organization.
- **Assign Roles:** Ability to assign specific roles (e.g., Editor, Viewer, Organization Admin) to invited members, controlling their permissions and access levels within the organization.
- **Remove Users:** Organization Owners and Admins can remove users from their organization, revoking their access to organizational documents and features.
- **Transfer Ownership:** The Organization Owner can transfer ownership of the organization to another user, which is crucial for succession planning and administrative changes.

11. Admin Flow

The Admin Flow provides Super Admins and Organization Admins with comprehensive tools to oversee and manage the platform's users, documents, and overall system health.

Admin Dashboard Features:

- **Users:** Management of all user accounts, including viewing user details, roles, activity, and the ability to suspend or delete accounts.
- **Documents:** Overview and management of all documents across the platform, including monitoring processing status, storage usage, and performing bulk actions.
- **Organizations:** Management of all registered organizations, including their settings, members, and resource allocation.

- **Storage:** Monitoring of storage consumption, capacity management, and potential alerts for nearing storage limits.
- **Analytics:** Access to detailed analytics and reports on platform usage, document interactions, AI query patterns, and user engagement.
- **Audit Logs:** Comprehensive logs of all significant actions performed within the platform, crucial for security, compliance, and troubleshooting.
- **AI Usage:** Monitoring of AI model performance, query volumes, and resource consumption related to AI functionalities.
- **System Health:** Real-time monitoring of system performance, server status, and alerts for any operational issues.

12. Settings Flow

The Settings Flow allows users to personalize their experience, manage their profile, security settings, and other application preferences.

User Settings:

- **Profile:** Users can view and update their personal information, such as name, email address, and profile picture.
- **Password:** Ability to change their account password securely.
- **API Keys:** Management of API keys for integrating the platform with external applications or services (if applicable).
- **Notifications:** Configuration of notification preferences, including types of notifications received (e.g., email, in-app) and their frequency.
- **Theme:** Customization options for the application's visual theme (e.g., light mode, dark mode).
- **Language:** Selection of the preferred language for the user interface.
- **Billing (future):** A planned section for managing subscription plans, viewing invoices, and updating payment information.
- **Security:** Overview of security-related settings, such as active sessions and connected devices.
- **Sessions:** Management of active login sessions, allowing users to view and revoke access from unfamiliar devices.

13. Error Flows

Robust error handling is crucial for a positive user experience and system reliability. This section outlines common error scenarios and how the platform will address them.

Common Error Scenarios:

- **Upload Failure:** Occurs when a document upload fails due to network issues, invalid file format, or server errors. The system will provide clear error messages and guidance for resolution.
- **Authentication Failure:** Covers scenarios like incorrect login credentials, expired tokens, or unauthorized access attempts. Users will receive appropriate feedback and options for recovery (e.g., forgot password).
- **Network Loss:** Handles situations where the user's internet connection is interrupted during an operation. The system will attempt to gracefully recover or inform the user about the connection issue.
- **Rate Limiting:** When users exceed predefined API request limits, the system will inform them and provide guidance on when they can retry.
- **AI Timeout:** If an AI query takes too long to process, the system will notify the user and offer options to retry or simplify the query.
- **Large Document:** Alerts users when they attempt to upload documents exceeding the maximum allowed size, providing clear limits and potential solutions.
- **Permission Denied:** Informs users when they try to access resources or perform actions for which they lack the necessary permissions, guiding them to request access or contact an administrator.
- **Expired Session:** Automatically logs out users when their session expires, prompting them to re-authenticate for security.

14. Empty States

Well-designed empty states provide guidance and encourage user engagement when there is no content to display, turning potential frustration into productive action.

Empty State Scenarios:

- **No Documents:** When a workspace has no documents, the empty state will prompt the user to upload their first document, possibly with a clear call-to-action button.
- **No Chats:** If a user has no previous AI chat conversations, the empty state will encourage them to start their first chat, perhaps with example questions.

- **No Search Results:** When a search yields no results, the empty state will suggest refining the search query, checking for typos, or broadening the search scope.
- **No Workspaces:** For new users or organizations without any workspaces, the empty state will guide them through the process of creating their first workspace.
- **No Notifications:** When there are no new notifications, the empty state will indicate that everything is up to date, providing a sense of completeness.

15. Notification Flow

The Notification Flow ensures users are kept informed about important events, system updates, and actions requiring their attention, both within the application and externally.

Notification Types:

- **Upload Completed:** Notifies the user when a document upload has successfully finished processing and is ready for use.
- **Processing Completed:** Informs the user when a document has completed all processing steps (OCR, chunking, embedding, indexing).
- **Invitation Accepted:** Alerts the inviting user when a new member has accepted their invitation to join the organization or workspace.
- **AI Failed:** Notifies the user if an AI chat query or document processing task encountered an error.
- **Storage Warning:** Warns users when their storage usage is approaching its limit, prompting them to manage documents or consider upgrading their plan.
- **Security Alerts:** Informs users about suspicious activities, unauthorized access attempts, or critical security updates.

16. Mobile Flow

The Mobile Flow addresses the responsiveness and adaptability of the application across various devices, ensuring a consistent and optimized user experience on smartphones and tablets.

Mobile Design Considerations:

- **Responsive Navigation:** The navigation system will adapt to smaller screens, typically collapsing into a hamburger menu or utilizing a bottom navigation bar for primary actions.

- **Bottom Navigation:** For mobile devices, frequently used actions and primary navigation links will be accessible via a persistent bottom navigation bar.
- **Tablet Layout:** Optimized layouts for tablet devices, taking advantage of larger screen real estate while maintaining touch-friendly interactions.
- **Desktop Layout:** The standard layout for larger screens, featuring full sidebars and multi-panel views.

17. UX Flow

The UX Flow focuses on overarching user experience principles and optimizations to make the platform intuitive, efficient, and enjoyable to use.

UX Principles and Optimizations:

- **Minimize Clicks:** Design choices will prioritize reducing the number of clicks required to complete common tasks, streamlining workflows.
- **Keyboard Shortcuts:** Implementation of keyboard shortcuts for power users to quickly navigate and perform actions without relying solely on the mouse.
- **Accessibility:** Adherence to accessibility standards (e.g., WCAG) to ensure the platform is usable by individuals with disabilities, including screen reader support, keyboard navigation, and sufficient color contrast.
- **Loading States:** Clear and informative loading indicators (spinners, progress bars) will be used to manage user expectations during data fetching or processing.
- **Skeleton Screens:** Placeholder UI elements that mimic the structure of the content being loaded, providing a perception of faster loading times and reducing cognitive load.
- **Optimistic Updates:** UI updates that immediately reflect user actions, even before server confirmation, providing instant feedback and a more responsive feel.
- **Streaming UI:** For AI chat responses or large data loads, content will be streamed to the UI as it becomes available, enhancing perceived performance and engagement.

18. Mermaid Diagrams

Mermaid diagrams will be used to visually represent key application flows, providing a clear and concise understanding of user interactions and system processes.

19. Screen Inventory

This section provides a comprehensive list of all screens within the application, detailing their purpose, primary and secondary actions, associated permissions, and navigation entry points.

Screen Details:

- **Landing Page**
 - **Purpose:** Introduce the platform, highlight features, and drive user acquisition.
 - **Primary actions:** Sign Up, Login, Learn More.
 - **Secondary actions:** View pricing, Contact sales.
 - **Permissions:** Publicly accessible.
 - **Navigation entry:** Direct URL access.
- **Login Screen**
 - **Purpose:** Authenticate existing users.
 - **Primary actions:** Enter credentials, Login.
 - **Secondary actions:** Forgot Password, Sign Up (redirect).
 - **Permissions:** Publicly accessible.
 - **Navigation entry:** Landing Page, Logout, Session Expiry.
- **Sign Up Screen**
 - **Purpose:** Allow new users to create an account.
 - **Primary actions:** Enter registration details, Sign Up.
 - **Secondary actions:** Login (redirect).
 - **Permissions:** Publicly accessible.
 - **Navigation entry:** Landing Page, Login.
- **Email Verification Screen**
 - **Purpose:** Verify user's email address.
 - **Primary actions:** Click verification link (external to app), Resend email.
 - **Secondary actions:** Login (redirect).
 - **Permissions:** Authenticated (pending verification).
 - **Navigation entry:** After Sign Up.
- **Forgot Password Screen**

- **Purpose:** Initiate password reset process.
- **Primary actions:** Enter email, Send reset link.
- **Secondary actions:** Login (redirect).
- **Permissions:** Publicly accessible.
- **Navigation entry:** Login Screen.
- **Reset Password Screen**
 - **Purpose:** Allow users to set a new password.
 - **Primary actions:** Enter new password, Reset Password.
 - **Secondary actions:** Login (redirect).
 - **Permissions:** Publicly accessible (via unique token).
 - **Navigation entry:** Via reset link from email.
- **Organization Creation Screen**
 - **Purpose:** Setup a new organization within the platform.
 - **Primary actions:** Enter organization details, Create Organization.
 - **Secondary actions:** Skip (if joining existing org).
 - **Permissions:** New authenticated users.
 - **Navigation entry:** After Email Verification (for first-time org owners).
- **Workspace Creation Screen**
 - **Purpose:** Create a new workspace for document management.
 - **Primary actions:** Enter workspace details, Create Workspace.
 - **Secondary actions:** Skip, View existing workspaces.
 - **Permissions:** Organization Owner, Organization Admin.
 - **Navigation entry:** Onboarding Flow, Dashboard, Workspaces section.
- **Invite Members Screen**
 - **Purpose:** Invite users to an organization or workspace.
 - **Primary actions:** Enter email addresses, Assign roles, Send Invitations.
 - **Secondary actions:** View pending invitations.
 - **Permissions:** Organization Owner, Organization Admin.
 - **Navigation entry:** Onboarding Flow, Organization Settings, Workspace Settings.
- **Dashboard Screen**
 - **Purpose:** Provide an overview of user activity, documents, and quick actions.

- **Primary actions:** Quick access to AI Chat, Upload Document, Search.
- **Secondary actions:** View recent documents, Notifications, Analytics summary.
- **Permissions:** All authenticated users.
- **Navigation entry:** Login success, Home button.
- **Document List Screen**
 - **Purpose:** Display all documents within a selected workspace.
 - **Primary actions:** Upload Document, Search, Filter, Sort.
 - **Secondary actions:** View document details, Delete, Download.
 - **Permissions:** Editor, Viewer (read-only).
 - **Navigation entry:** Sidebar (Documents), Dashboard.
- **Document Viewer Screen**
 - **Purpose:** Display the content of a selected document.
 - **Primary actions:** Navigate pages, Highlight citations, Download.
 - **Secondary actions:** View metadata, Open original file.
 - **Permissions:** Editor, Viewer.
 - **Navigation entry:** Document List, Search Results, AI Chat (via citation).
- **AI Chat Screen**
 - **Purpose:** Interact with the AI for grounded answers.
 - **Primary actions:** Enter question, Send message.
 - **Secondary actions:** View chat history, Provide feedback, View citations.
 - **Permissions:** Editor, Viewer.
 - **Navigation entry:** Sidebar (AI Chat), Dashboard.
- **Search Results Screen**
 - **Purpose:** Display results from document searches.
 - **Primary actions:** Refine search, Apply filters, Sort results.
 - **Secondary actions:** View document, Start AI chat.
 - **Permissions:** Editor, Viewer.
 - **Navigation entry:** Global Search, Search Flow.
- **Analytics Dashboard Screen**
 - **Purpose:** Provide insights into platform usage and document interactions.
 - **Primary actions:** View various reports, Filter data.

- **Secondary actions:** Export data.
- **Permissions:** Organization Owner, Organization Admin.
- **Navigation entry:** Sidebar (Analytics).
- **Admin Dashboard Screen**
 - **Purpose:** Central hub for platform administration.
 - **Primary actions:** Manage Users, Manage Organizations, Monitor System Health.
 - **Secondary actions:** View Audit Logs, AI Usage.
 - **Permissions:** Super Admin, Organization Admin.
 - **Navigation entry:** Sidebar (Admin).
- **User Management Screen**
 - **Purpose:** Manage user accounts and roles within an organization.
 - **Primary actions:** Add User, Edit User, Remove User, Assign Roles.
 - **Secondary actions:** View user activity.
 - **Permissions:** Organization Owner, Organization Admin.
 - **Navigation entry:** Admin Dashboard.
- **Organization Management Screen**
 - **Purpose:** Manage organization settings and details.
 - **Primary actions:** Edit Organization details, Transfer Ownership.
 - **Secondary actions:** View members, Manage billing (future).
 - **Permissions:** Organization Owner, Super Admin.
 - **Navigation entry:** Admin Dashboard.
- **Settings Screen**
 - **Purpose:** Allow users to manage their profile and application preferences.
 - **Primary actions:** Edit Profile, Change Password, Configure Notifications.
 - **Secondary actions:** Manage API Keys, Select Theme, Manage Sessions.
 - **Permissions:** All authenticated users.
 - **Navigation entry:** Top Navigation (Profile Icon), Sidebar.
- **Notifications Screen**
 - **Purpose:** Display a list of all system notifications.
 - **Primary actions:** Mark as read, Clear notifications.
 - **Secondary actions:** Filter notifications.

- **Permissions:** All authenticated users.
- **Navigation entry:** Top Navigation (Notification Icon).

20. Navigation Map

This section presents a complete navigation tree, illustrating the hierarchical structure of the application and how users can move between different sections.
